DETAILED ACTION

1. This communication is in response to Applicants' Appeal dated 11/22/2004 (the "Appeal Brief").

In view of the Appeal Brief, PROSECUTION IS HEREBY REOPENED. A new ground of rejection is set forth below.

To avoid abandonment of the application, appellant must exercise one of the following two options:

- (a) file a reply under 37 CFR 1.111 (if this Office action is non-final) or a reply under 37 CFR 1.113 (if this Office action is final); or,
- (b) request reinstatement of the appeal.

If reinstatement of the appeal is requested, such request must be accompanied by a supplemental appeal brief, but no new amendments, affidavits (37 CFR 1.130, 1.131 or 1.132) or other evidence are permitted. See 37 CFR 1.193(b)(2).

Double Patenting

2. A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Art Unit: 2128

Claims 1, 3-4, 7, 9, 10, 11 and 14-18 are rejected under 35 U.S.C. 101 as claiming the same invention as that of claims 1-43, particular to claims 41-43 of prior U.S. Patent No. 5,504,327. This is a double patenting rejection.

As per claims 1 and 3-4, claims 1-43, particular claim 41, of the US patent no. 5,504,327 anticipates a method for characterizing the three-dimensional structure of a large molecule including steps

Creating by mixing a small molecule with a large molecule so that a small molecule binds non-covalently to the large molecule to form a large molecule-small molecule complex,

performing electrospray ionization mass spectrometry to obtain the spectrum of the large molecule-small molecule complex (claim 41, step (a)),

repeating the steps above with additional different small molecules (step (a) of claim 41),

and utilizing the spectra to characterize the three dimensional structure of the large molecule complex proteins (claim 41, steps (a)-(f)).

Similarly, claims 1-43, particular claim 41, of US patent no. 5,504,327 anticipates claims 7, 9, 10, 11, and 14-18 of the present application.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2128

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 3, 4, 7, 9, 10-11, and 14-18 are rejected under 35 U.S.C. 102(b) as being anticipated by Sproch et al, US patent no. 5,504,327.

As per claims 1, 3, 4, 7, 9, 10-11, and 14-18, Sproch anticipates a method and system for characterizing the three dimensional complex molecules such as protein with feature limitations identical to the claimed invention (see cols. 6-16, and claims 1-43).

Allowable Subject Matter

4. Claims 2, 5, 6, 8, and 12-13 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
